# Target Students, Student Pain Points & Workshop Proposition

Why final-year engineering students will act now on a 60-minute practical AI workshop

**TARGET COHORT: Final-Year & Pre-Final Year B.Tech/BE Students (2025/2026 Batches)**

Students actively facing campus placement season, technical screening rounds, and final-year project requirements.

**BRANCHES: CSE, IT, AI/DS, ECE • Tier-2 & Tier-3 Colleges**

High urgency for defensible, resume-ready project experience without complex setup friction.

### 01. Resume Inadequacy

Generic tutorial projects (calculators, to-dos) get filtered out by recruiters. Students need modern AI keywords (APIs, semantic search, latency optimization) on resumes.

### 02. Cloud Cost & Setup Dread

Fear of incurring unexpected credit card charges on paid LLM APIs or breaking Python/Docker environments. Students require a guaranteed 100% free build.

### 03. Course Fatigue & Time Limits

40-hour video courses suffer < 5% completion rates during busy placement semesters. A 60-minute sprint provides immediate working closure with zero schedule friction.

**VALUE PROPOSITION: “Build Your First AI Project in 60 Minutes”**

**100% FREE • 60 MINS**

Go from idea to a working AI-powered application in one live guided sprint. Understand the client-to-model software architecture, connect an interface, and build an asset you can test and defend in job interviews.

Zero Paid Cloud Requirements

# Priority Channels & Acquisition Model (500 Goal on ■2,000 Budget)

Capital-efficient multi-channel architecture turning student networks into a viral movement

| 500 | ■2,000 | ■4.00 | 7 DAYS |
|---|---|---|---|
| REGISTRATIONS | TOTAL BUDGET CAP | TARGET BLENDED CAC | CAMPAIGN TIMELINE |

| PRIORITY CHANNEL | TARGET | SHARE | BUDGET | CAC | TACTICAL ACQUISITION STRATEGY |
|---|---|---|---|---|---|
| **Campus Clubs & Student Ambassadors** | 150 | 30% | ■500 | ■3.33 | Onboard 15 student leads across key engineering colleges with club noticeboard flyers & digital kits. |
| **WhatsApp Student Communities** | 140 | 28% | ■300 | ■2.14 | Value-first micro-carousels in 35+ departmental class, lab, and placement announcement groups. |
| **College Email & Placement Bulletins** | 70 | 14% | ■0 | ■0.00 | Placement cell student rep forwarding; inclusion in official weekly department bulletins. |
| **LinkedIn & Instagram Organic** | 60 | 12% | ■0 | ■0.00 | Student project breakdown clips: 'Why building a 60-min AI project beats 20-hr video courses.' |
| **Referral-Led Acquisition *(Overlay)*** | 80 | 16% | ■0 | ■0.00 | Post-registration peer viral loop (Target K ≥ 0.35) with collision-resistant links & leaderboard. |
| **CAMPAIGN TOTAL / BLENDED** | **500** | **100%** | **■2,000** | **■4.00** | Includes ■800 high-intent search experiment & ■400 contingency buffer. |

***Double-Counting Governance:*** *Referral acquisition is an attribution overlay. Reaching students via WhatsApp and ambassadors feeds the viral loop, generating 80 verified peer registrations at ■0 incremental cost.*

# Seven-Day Execution Plan & Daily Targets (30 → 100 / Day)

Disciplined daily acquisition milestones paired with automated decision triggers

**DAY 01 • TARGET: 30 (Cum: 30)**
**Ambassador Program Launch**
Brief 15 core student campus leads with tracking copy kits; place posters on club noticeboards across 5 pilot engineering colleges.

**DAY 02 • TARGET: 50 (Cum: 80)**
**WhatsApp Class Hub Broadcast**
Distribute micro-carousels in 35+ departmental class and lab WhatsApp groups focusing on resume AI project benefits.

**DAY 03 • TARGET: 65 (Cum: 145)**
**Placement Bulletin Outreach**
Placement cell student rep email blasts; release the first public referral leaderboard update recognizing top student referrers.

**DAY 04 • TARGET: 75 (Cum: 220)**
**Mid-Point Pacing Audit**
Publish LinkedIn project teasers. Trigger 70% pacing check: if cumulative registrations < 154, shift 100% focus to top 2 channels.

**DAY 05 • TARGET: 85 (Cum: 305)**
**Tactical Search Experiment**
Deploy optional ₹400-₹800 experiment targeting students seeking capstone projects; activate peer invites: 'Bring your project partner.'

**DAY 06 • TARGET: 95 (Cum: 400)**
**Peer Referral Flywheel Surge**
Trigger in-app WhatsApp nudges: invite 2 peers to unlock Project Starter Kit. Spotlight top 3 ambassadors on the public leaderboard.

**DAY 07 • TARGET: 100 (Cum: 500)**
**Final 24-Hour Registration Closeout**
Last-chance broadcast across all community hubs. Freeze registration pipelines, lock verified records, and deliver workshop credentials.

**AUTOMATED 70% PACING DECISION RULE:**

If cumulative registrations drop below 70% of target by Day 4 (< 154 registrations), immediately freeze broad promotional spend, concentrate 100% effort on the top 2 highest-converting campus channels, and onboard 5 additional student ambassadors before drawing from contingency funds.

# ■2,000 Budget Allocation, Governance & Decision Rules

Disciplined capital efficiency with automated, explainable growth intelligence

### Campus Ambassadors
**■500 (25%)**
Physical club flyers, noticeboard prints, and lead recognition rewards.

### Student Creatives
**■300 (15%)**
WhatsApp carousel micro-kits, Figma visual templates, and class banners.

### Optional Experiment
**■800 (40%)**
Targeted high-intent search experiment for capstone keywords (capped at ■200/day).

### Contingency Reserve
**■400 (20%)**
Capital buffer for mid-campaign optimization or unexpected outreach needs.

## GOVERNING FINANCIAL RULES

• **Database-Level Cap Lock:** Enforced ■2,000 ceiling. System rejects over-budget expenses unless explicitly confirmed.

• **Organic Independence:** The campaign reaches 450+ registrations purely through campus clubs, WhatsApp, and referrals even if the ■800 paid experiment produces zero results.

• **Conversion Anomaly Rule:** If a channel logs ≥ 20 visits but < 7.5% conversion, simplify form friction and align copy immediately.

## EXPLAINABLE GROWTH INTELLIGENCE

• **Deterministic Heuristics:** Evaluates conversion funnels, viral coefficients (K), and campus clusters without paid third-party AI APIs.

• **'Explain This' Transparency:** Every recommendation in the admin dashboard details the mathematical evidence, sample size confidence, and risk of inaction.

• **Zero Cloud Billing:** Runs 100% locally with zero cloud API keys, zero hallucinations, and zero unpredictable billing surprises.

# Working Software Asset, Assumptions & Risk Mitigation

Complete integrated software platform turning one registration into a campus-wide movement

## LAUNCHLOOP AI PLATFORM CAPABILITIES

**1. Custom Local NoSQL Database:** 8 structured JSON document collections in data/ with atomic writes, serialized mutex queues, and automatic corruption recovery.

**2. Collision-Resistant Referral Engine:** Generates unambiguous LL-XXXXX codes, rejects self-referrals, enforces one-referrer rules, and updates privacy-masked leaderboards.

**3. Telemetry & UTM Link Generator:** Tracked campaign links measuring click-to-registration conversion rates without external analytics trackers.

**4. Executive Command Center:** 8 KPI cards, Recharts acquisition curves, CAC calculations, and spreadsheet formula injection-proof CSV exports.

## ASSUMPTIONS & RISK MITIGATION MATRIX

• **Key Assumptions:** Core ambassadors recruit 10–15 peers across their respective class sections. Free 60-min project framing converts at 10–12% of visits.

• **Risk: WhatsApp Spam Fatigue:**
*Mitigation:* Hard cap of 2 high-value messages per group with actionable AI architecture snippets rather than generic links.

• **Risk: Form Abandonment:**
*Mitigation:* Minimal fields; phone number is strictly optional with explicit consent; instant client validation.

• **Risk: Referral Gaming:**
*Mitigation:* Server-side email normalization, duplicate detection, and anti-self-referral validation.

**17/17 AUTOMATED VERIFICATION TESTS PASSED**

Registration uniqueness, referral attribution, budget cap warnings, auth protection, NoSQL crash recovery, and CSV formula sanitization tested and verified.

**100% LOCAL EXECUTION • ZERO PAID APIS**

Node.js • Express • React • TypeScript
